

# Help us understand the genetic drivers of infertility

In our continued commitment to innovation in the treatment of infertility, RMA of New York has partnered with Celmatix to conduct an ambitious research study that will help us understand the genetic factors that underlie both fertility potential and infertility.

Your participation could help us get one step closer to understanding unexplained infertility and a woman's fertility potential.

**To join this study, please speak with your doctor or a member of your clinical team.**

**If you are a current or prospective patient of RMA of New York, we invite you to join this national research effort.**

#### **Who is eligible to participate?**

Any woman between the ages of 18-45 is eligible to participate, including those who are seeking help conceiving and/or fertility preservation.

#### **What will I be asked to do?**

You will be asked to donate blood during a routine blood draw and to allow researchers to review your relevant medical information. This information will be used to help discover genetic factors associated with a woman's fertility.
